

VALUEPOINT™ WI-FI GEAR SUPPORTS VIDEO SURVEILLANCE ON BUSES THROUGHOUT THE U.S.

SAN FRANCISCO, CA, August 27, 2007 -- ValuePoint Networks, Inc. is supplying rugged Access Points (APs) to Integrian® for its TransitCam® system, equipping public transit buses and school buses, in several cities around the United States, with video surveillance systems. These systems are part of several pilot programs rolled out by the each of the cities' transit and school systems to evaluate full scale roll outs.

"The ValuePoint Networks WiFi gear is meeting our expectations for high power, ruggedness and reliability", says Ian Arcuri, Program Director at Integrian. "In addition ValuePoint upgraded the construction of their AP to withstand the special vibrations found on the Diesel powered vehicles."

The TransitCam system allows each bus to store many hours of video recordings and wirelessly upload those recordings onto a server on a daily basis. In this way, the cities are able to keep a video log for each bus. In addition, the system supports real time wireless video streaming on an as needed basis. For example, a police car can connect to the video cameras on the buses when the car comes within wireless range of a particular bus.

The ValuePoint 530g Rugged Access Point is used inside each bus, running in Client mode. It is connected via Ethernet to the TransitCam system. When it is within range of an AP at the dispatch center, it automatically connects, and the TransitCam system uploads the entire video recording. Also police cars are equipped with high-powered ValuePoint APs so that live video can be remotely viewed within the police cars, if necessary. The range is superb, and the connection is secured using WPA2 encryption.

"We are proud to support Integrian in this exciting new application. Our products continue to find their way into new markets, and the video surveillance market is definitely one that is growing rapidly." says David Grissom, VP Business Development for ValuePoint Networks. "Remote video surveillance, especially on moving vehicles, uses wireless and Wi-Fi transport more frequently. High power, and rugged, Wi-Fi products make this possible. This gives the customer quicker uploads of video from multiple vehicles, and the option of real-time monitoring capability."

About ValuePoint Networks

www.valuepointnet.com

ValuePoint Networks is the foremost manufacturer of price leading Gateway Controllers, Rugged Access Points, and Mesh gear. ValuePoint products are used in Hospitality, MTU/MDU, industrial, WISP, outdoor, hotspot, municipal, and enterprise applications. Light up more for less, reduce capital expenditures, and improve your ROI with ValuePoint gear.

About Integrian

www.integrian.com

Integrian is a pioneer of mobile video camera technology. Integrian's video surveillance systems are known for their reliability and accuracy particularly in harsh, mobile environments. Police agencies, transportation authorities and others look to Integrian to provide the highest possible protection against frivolous lawsuits, vandalism and security threats.
