

FOR IMMEDIATE RELEASE

WIFIFEE USING VALUEPOINT NETWORKS GEAR FOR VOIP SERVICE

Rugged, High-Power Access Points Provide Coverage, Security, Bandwidth Allocation

Menands, NY. – July 31, 2006—WiFiFee, a Wireless Internet Service Provider offering access at over 2100 locations world-wide, has completed testing of VOIP phones with ValuePoint Networks' Access Points, and will soon be rolling out locations with voice support using ValuePoint gear.

WiFiFee has extensive expertise in the design, implementation, and support of WiFi networks supporting both data and voice. The need for voice support is growing rapidly in WiFiFee's core markets of MultiTenant Units, MultiDwelling Units, Hospitality and Colleges and Universities.

“We have been impressed and more than satisfied with the range, coverage, and performance of ValuePoint products,” said Brian Epstein, President of WiFiFee. “We especially like their IA-12 products with the Integrated 12 dBi antennas. We will use their newest version, the MultiAP 700G IA-12, in future voice and data applications. It has Multi-SSID/VLAN and Quality of Service support, and this is very important in supporting voice and data concurrently. We use Multi-SSID extensively in our deployments. In addition the integrated 12 dBi antenna model provides excellent coverage in an easy-to-install, compact, cost-effective unit.”

“WiFiFee is an excellent partner for us and their installations are good examples of where our products shine,” said David Grissom, ValuePoint Networks' vice president of business development. “They are smart and capable. WiFiFee challenges our products with rigorous testing and due diligence before selecting them, and we are thankful for that. We feel we always come out ahead when companies fully evaluate what is out there.”

About ValuePoint Networks

ValuePoint Networks is a manufacturer of controllers and rugged access points for distributed Wi-Fi applications. ValuePoint's products are designed for the unique needs of service providers, wireless ISPs, billing providers, and venue operators in the burgeoning public access space. This includes hotels, RV parks, marinas, airports, multi-tenant units, multi-dwelling units, and outdoor wireless applications. For more information on ValuePoint's controllers, rugged access points, and accessories, please visit www.valuepointnet.com
